### **Methods for word cloud creation and word counts:**

A data frame was created using the titles and abstracts from all the Cochrane Emergency and Critical Care, Anesthesia, and Injuries reviews. Text mining and data curation were conducted at both the title and abstract levels using the "tm" R package (Ref 1). The text was cleaned by converting to lowercase and replacing special characters with spaces. Punctuation, numbers, and stop words were removed. Text stemming, which reduces words to their root forms for normalization, was applied using the "SnowballC" R package (Ref 2). Following this, words with general and non-relevant meanings were excluded manually (Supplement). The "wordcloud" and "RColorBrewer" R packages generated word frequencies, clouds, and bar plots (Ref 3, Ref 4). All statistical analyses were performed using Rstudio, R version 4.4.0.

### **Results**

Table 1 presents the 100 most frequent words found in the titles of emergency reviews, providing an overview of the most commonly used terms. The word "adults" is the most frequent (frequency=58), following this, "critically" and "ill" (frequency=35), "respiratory" (frequency=25), and "sepsis" (frequency=24). Figure 1 visually represents these frequencies in a word cloud, where larger words correspond to higher frequencies. Figure 2 offers a bar plot of the 30 most frequent words, visually displaying their frequencies in descending order.

**Table 1- 100 Most Frequent Words in Emergency Reviews Titles**

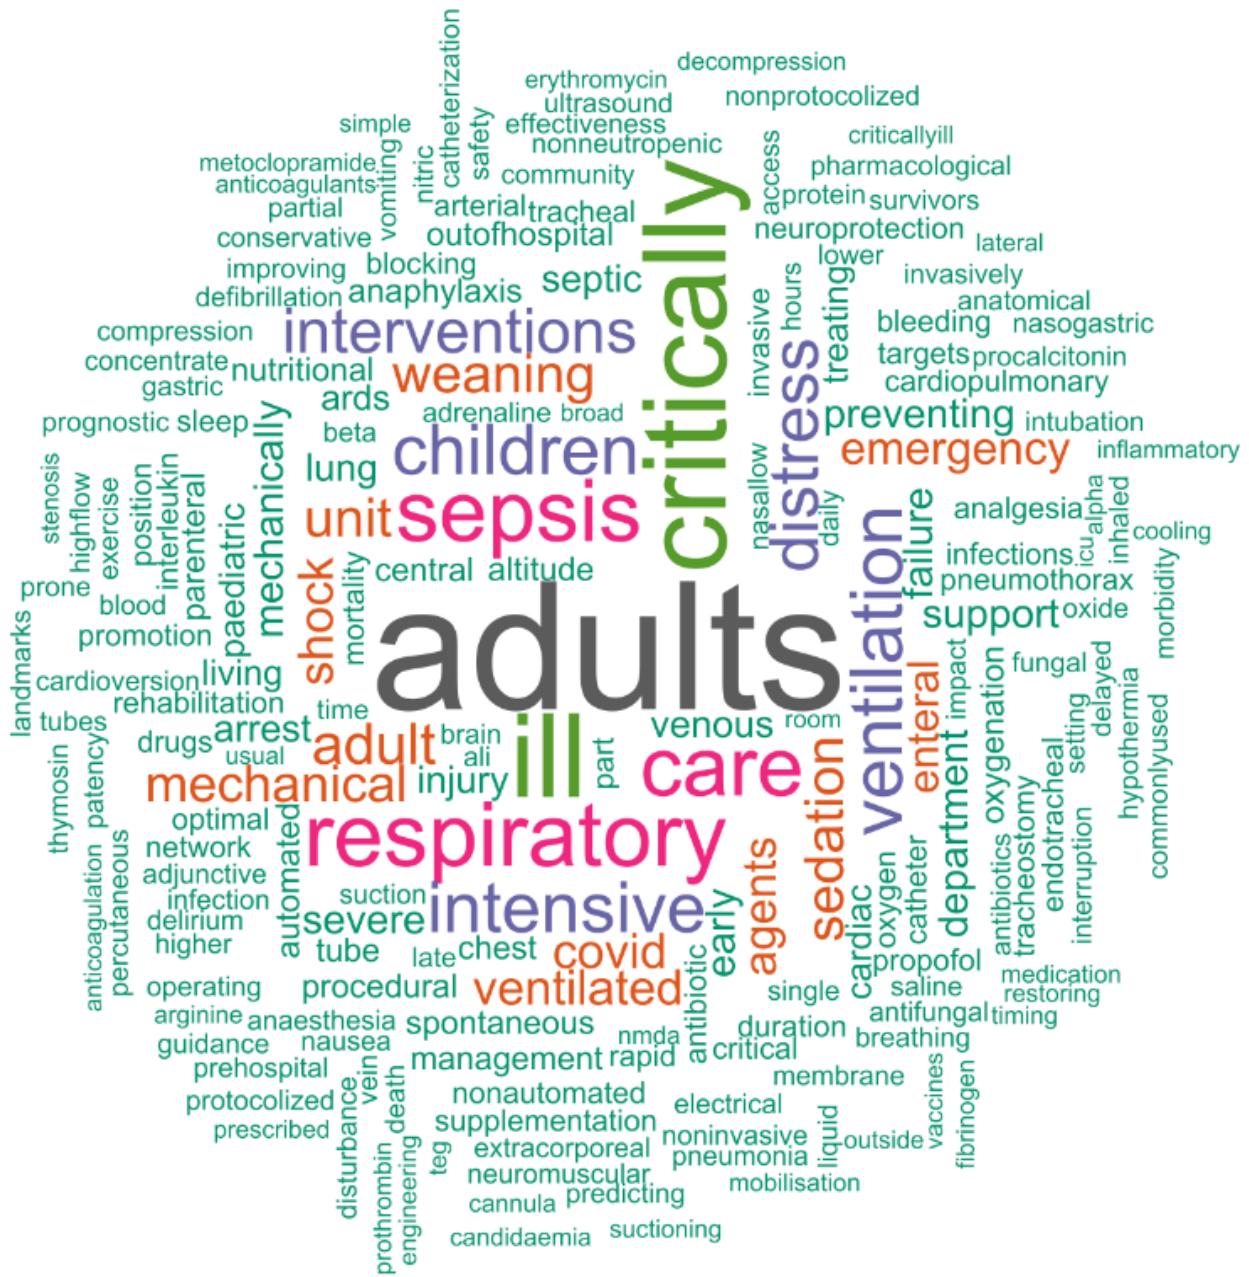

Word	Frequency
adults	58
critically	35
ill	35
respiratory	25
sepsis	24

**Figure 1 - Word Cloud Representation of Word Frequencies in Emergency Reviews Titles**

Figure 1 visually represents the frequency of terms found in the titles of emergency reviews. Larger words indicate higher frequency of occurrence, while smaller words denote less frequent terms. Key terms such as "adults," "critically," "ill," "respiratory," "sepsis," "care," "ventilation," and "children" are prominently featured, highlighting their significance in emergency medical reviews.

**Figure 2- Barplot of the 30 Most Frequent Words in Emergency Reviews Titles**

Figure 2 illustrates the frequency of the 30 most common words in emergency review titles.

The x-axis represents the words, and the y-axis represents their frequencies. The words are ordered from the most to the least frequent.
